Sectors:	Financial Services- telecommunications, health services, online gaming and government, etc
Affiliations:	An autonomous member of SecureData Holdings

In an industry filled with fear, uncertainty and doubt SensePost stand as trusted advisors to deliver insight, information and systems to enable their customers to make strong decisions about Information Security that support their business performance.

3 APPROACHES

SensePost is able to take three different but complimentary approaches to providing you insight into your IT security posture:

1. A Penetration Test:

A Penetration Test is basically an attempt by an ethical hacker, working under strict constraints, to compromise specific system, set of systems or data. Such an exercise is generally quite effective in answering the question 'can we be compromised'? However, it does not provide a complete view of what and where all the exploitable weaknesses are.

2. A Security Assessment:

A Security Assessment usually includes some degree of Penetration Testing, but it takes a more formal and systematic approach and provides a comprehensive view of where all the exploitable vulnerabilities are and what should be done to remediate them. This makes the Vulnerability Assessment a very valuable exercise for decision makers. However, an Assessment still only presents a point-in-time view of the target security posture. Of course, this view can change rapidly as new attack vectors are developed, as the target itself changes or even as the issues are remediated.

WHAT'S IN OUR NAME?

Honestly, we just made it up. It was the heart of the .com boom and we were intent on avoiding anything with 'cyber and 'sec'. What our name has come to represent is more important. Try this etymology for size:

SENSE

- a sane and realistic attitude to situations and problems

POST

- a place where someone is on duty or where a particular activity is carried out

3. Vulnerability Management:

Vulnerability Management extends past the 'assessment' phase to integrate into a continuous process of assessment and remediation. Using a Managed Service approach we can continually identify security issues, prioritize them, notify the relevant parties for remediation then verify that the issues has been resolved. This is the least dramatic of the three approaches, but the most deliberate. Properly implemented Vulnerability

Management can provide an organization with an instant view of its security posture at a given time and the tools required to remediate issues as they are identified.

Of course, many variations and combinations of these approaches are also possible.

Auxiliary services, including training and consulting, round off our services offering and complete the value proposition to the customer.

WHY SENSEPOST?

Over more than a decade in service to the biggest and best organizations in the world, SensePost has built a reputation based on trust. Trust our integrity and objectivity, and Trust that we will provide the highest available level of technical expertise.
